Document 1 describes a method of preventing the invasion of ants by distributing a powder paste consisting of cement, gravel and an ant repellent onto the ground surface under the floor, spraying water from above, and then letting it cure. And from the common technical knowledge of a person skilled in the art, it can immediately be recognized that it is possible to prevent the invasion of ants even when not using an ant repellent if the ant control is done with concrete.</p> <p>The inventions of claims 13, 14 do not appear to be novel or to involve an inventive step in view of document 2 cited in the ISR. Document 2 describes a termite control method wherein a concrete containing sand, cement, water and termite control agent is used for the foundation of a house.</p> <p>The inventions of claims 5-8, 12 do not appear to involve an inventive step in view of document 1 cited in the ISR. Changing the ingredients of the gravel cannot be called difficult for a person skilled in the art, and the idea of mixing inorganic waste debris into the concrete is also something that could be easily conceived of by a person skilled in the art.</p>
